Subject: Model Code

Walter,

an FYI and another case of me hearing (obviously) something different that GE was actually saying.

We do not actually have the source codes for the model yet (they did say (in their letter forwarding the hard drive) that the source code was not in the hard drive). So we cannot at this time actually "look under the hood and take it apart". They also have not provided Hudson River specific manuals for each of the separate models in the "super model". They say it is coming, but I am not sure when that is. I have asked if they will have this available for the meeting with our model reviewers at limno tech.

Thought you should all know. Sorry we did not catch this earlier.
